Modern Society and Technology (CHEM 112)

Credit Hours: 3

Instructor: Muhammad Saeed

Schedule: Monday to Friday (10.15 AM – 12.15 PM)

The course is designed on the philosophy of liberal Arts & Sciences to educate all graduates so that they can communicate effectively and make informed decisions when faced with modern scientific and technological questions. Various topics ranging from sustainability, environment, and health to pollution and viral infections will be discussed from a scientist’s perspective but without using the technological jargon so that everyone, regardless of their academic background, can follow the discourse. The objective of the course is thus to help dispel scientifically incorrect narrative about scientific problems perpetuated on media, including, environmental pollution, climate change, energy and health issues etc. These topics will be discussed, to identify causes and solutions.
